Electronic Distance Measurement: An Introduction - Jean M ...

Electronic Distance Measurement (EDM) is a fundamental feature of modern surveying Total Stations.
Distance measurements can be made in two modes: [1] with a reflector using an Infrared or visible laser
electromagnetic wave and phase measurement or [2] 'reflectorless' using a visible laser beam and pulse
time of flight.

At the same time, it is a comprehensive reference book for all surveyors as well as for other
professionals and scientists who use electronic distance measurement as a measuring tool. Great
emphasis is placed on the understanding of measurement principles and on proper reduction and
calibration procedures.

Electronic Distance Measurement - An Introduction | Jean M ...

Electronic distance measurement (EDM) is a method of determining the length between two points, using
phase changes, that occur as electromagnetic energy waves travel from one end of the line to the other
end. As a background, there are three methods of measuring distance between two points:
