ITS acceptance and maintenance inspection manual is needed as a reference document to assist the Department's inspectors, ITS design and traffic operations and ITS maintenance personnel to ensure effective inspection and maintenance of ITS facilities. This manual should be a comprehensive reference document that has separate inspection (acceptance) and maintenance sections. Inspection (acceptance) section should definitely cover the following areas (but should not be limited to these only): Inspection of ITS equipments after the installation; Acceptance testing; Verifying that the corresponding ITS equipment and its elements have been manufactured and constructed in accordance to the quality requirements of the specifications/plans. Maintenance sections will cover the following areas (but should not be limited to these only): Routine maintenance of various ITS equipment including; Maintenance schedules for ITS systems and devices; Troubleshooting, spare parts inventory, configuration management and disaster recovery, etc. A wide variety of engineers including civil, mechanical, electrical, software and computer, and communication engineers, are required to design and construct ITS facilities. ITS device manufacturers, system vendors, suppliers, and contractors, etc., develop and provide drawings, guides, manuals, inspection procedures, maintenance procedures.

This report describes and documents the work completed on an implementation project funded by New Jersey Department of Transportation (NJDOT) and conducted by Rutgers Intelligent Transportation Systems (RITS) researchers. In a recent study funded by NJDOT, RITS researchers successfully developed a state-of-the-art Intelligent Transportation Systems inspection and maintenance manual (ITSIMM) and Rutgers ITS inspection and maintenance software (RITSIMS) based on ITSIMM. This report details the development of the implementations for the manual and software.

Within all areas of transportation, solutions for economical and environmentally friendly technology are being examined. Fuel consumption, combustion processes, control and limitation of pollutants in the exhaust gas are technological problems, for which guidelines like 98/69/EC and 99/96 determine the processes for the reduction of fuel consumption and exhaust gas emissions. Apart from technological solutions, the consequences of international legislation and their effects on environmental and climate protection in the area of the transportation are discussed.
