Simon "Si" Ramo was an American engineer, businessman, and author. He led development of microwave and missile technology and is sometimes known as the father of the intercontinental ballistic missile. He also developed General Electric's electron microscope. John Roy Whinnery was an American electrical engineer and educator who worked in the fields of microwave theory and laser experimentation.

Fields and Waves in Communication Electronics. Simon Ramo, John R. Winnergy, Theodore Van Duzer. (The same as the older version on this site, but with basic OCR.) This comprehensive revision begins with a review of static electric and magnetic fields, providing a wealth of results useful for static and time-dependent fields problems in which the size of the device is small compared with a wavelength.

As previously reported by the author at the 47th Annual GEC in paper AA-5 (1994) voltage and current standing waves have been observed along two-and four-turn inductive coils operated at 13.56 MHz. Inductive rf power was used to generate a CHF 3 plasma at 4 mTorr. Data from voltage and current probes installed on each end of the coil were used to derive spatial variations of V and I by using ...

The reciprocity theorem and the scattering matrix formalism of electromagnetic theory have been adapted to obtain formulas for scattering of acoustic waves from flaws. The technique has been applied, in the Born approximation, to determine scattering of plane waves by small flaws, and with an elastostatic approximation to find the scattering from a flat elliptical crack.
