The beech marten, also known as the stone marten, house marten or white breasted marten, is a species of marten native to much of Europe and Central Asia, though it has established a feral population in North America. It is listed as Least Concern by the IUCN on account of its wide distribution, its large population, and its presence in a number of protected areas. It is superficially similar to the pine marten, but differs from it by its smaller size and habitat preferences. While the pine mart

Where To Download Stone Marten Martes Foina Habitat In A Mediterranean

stone marten is a habitat generalist with synantropic behavior (use of human structures; Delibes 1983; Herrman 1994; Reig 1992). In areas of the Iberian Peninsula without pine martens (Matos and Santos-Reis 2006), stone martens are known to occupy the higher quality forest habitat (Virgós and Garcia 2002 ; Virgós et al. 2000).

Stone marten (Martes foina) habitat in a Mediterranean ...
The stone marten, or beech marten (M. foina), inhabits wooded country in Eurasia. It has grayish brown fur with a divided white throat bib. It weighs 1–2.5 kg (about 2–5.5 pounds), is 42–48 cm (16.5–19 inches) long, and is 12 cm (roughly 5 inches) high at....

Stone marten | mammal | Britannica

The stone marten (*Martes foina*) is often found in urban habitats across continental Europe, due to its flexible foraging behaviour. We compare the utilisation of food types for martens living in villages in a more populated region with that of martens living in a less populated mountainous forest region, over the summer fruiting season (May–July) of 2013, inferred from the analysis of 310 faecal samples.
